Placement of debt by Banco de México

- ❑ The significant liquidity injection that has occurred during 2010 and that is expected to continue in 2011—originated mainly by the accumulation of international reserves—implies that Banco de México will no longer supply credit through its open market operations on a daily basis

- ❑ Given these circumstances, and in order to maintain a more balanced liquidity position, Banco de México has decided to implement the following measures:
 - ❑ To increase the weekly placement of Bondes D from 2,000 to 4,000 million pesos. The amount will be equally distributed in 3-year and 5-year maturity bonds

 - ❑ To conduct an extraordinary auction of Cetes with maturities of 91, 175 and 357 days. The auction operational rules will be similar those used in the regular weekly auctions of Cetes

Placement of debt by Banco de México

- ❑ On December 23rd, 2010, and as a result of the maturity and coupon payments of different Federal Government securities, a liquidity injection of approximately 200,000 million pesos will take place
- ❑ The extraordinary Cetes placement that the Banco de México will undertake has the objective to partially withdraw this liquidity
- ❑ The extraordinary auction of Cetes will have the following schedule:
 - ❑ Friday December 17th: auction announcement
 - ❑ Wednesday December 22nd: primary auction
 - ❑ Thursday December 23rd: settlement
- ❑ These actions should not be interpreted as a change in Banco de México's monetary policy stance, since the overnight interbank rate will not change as a result of them
